

Static Website Hosting on AWS EC2 Using Security Groups

Project Description

- Developed and deployed a static HTML/CSS website on an **Amazon EC2 Linux instance** hosted in the AWS Cloud. Configured the **Security Group** to allow inbound HTTP (Port 80) and SSH (Port 22) traffic for secure remote access and public website availability.
- Connected to the EC2 instance using SSH, installed the Apache web server, uploaded the website files to the /var/www/html directory, and successfully hosted the website for public access through the EC2 public IP address.

Technologies Used

- Amazon Web Services (AWS)
- Amazon EC2
- Security Groups
- Ubuntu Linux
- Apache HTTP Server (Apache2)
- HTML5
- CSS3
- SSH

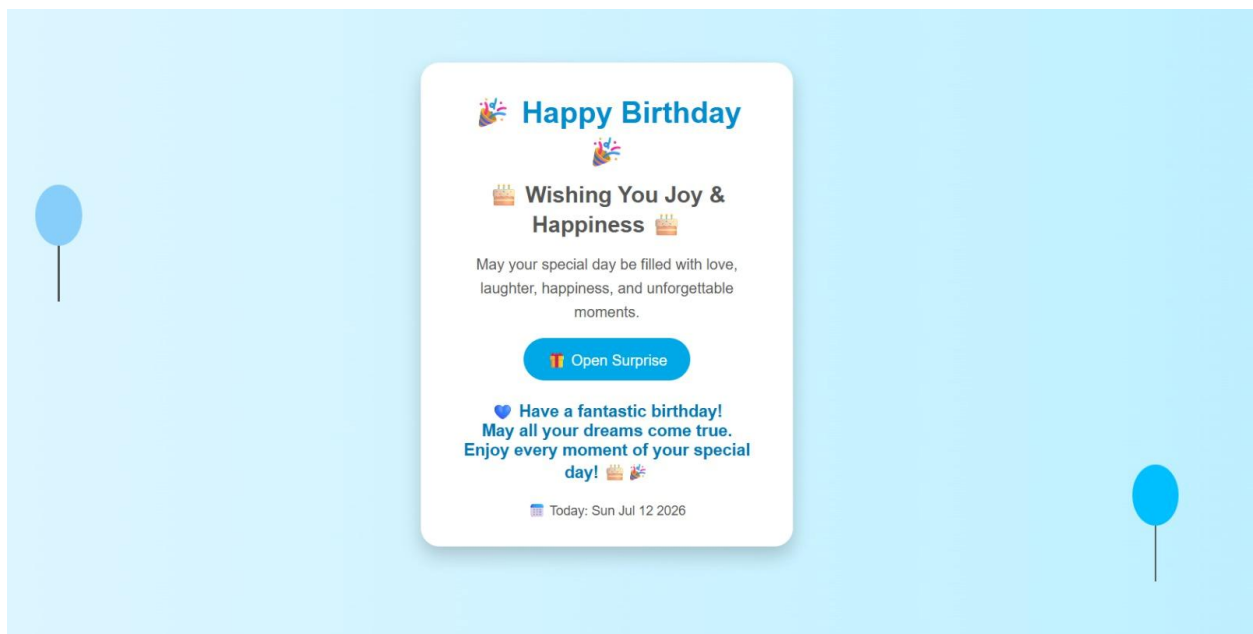

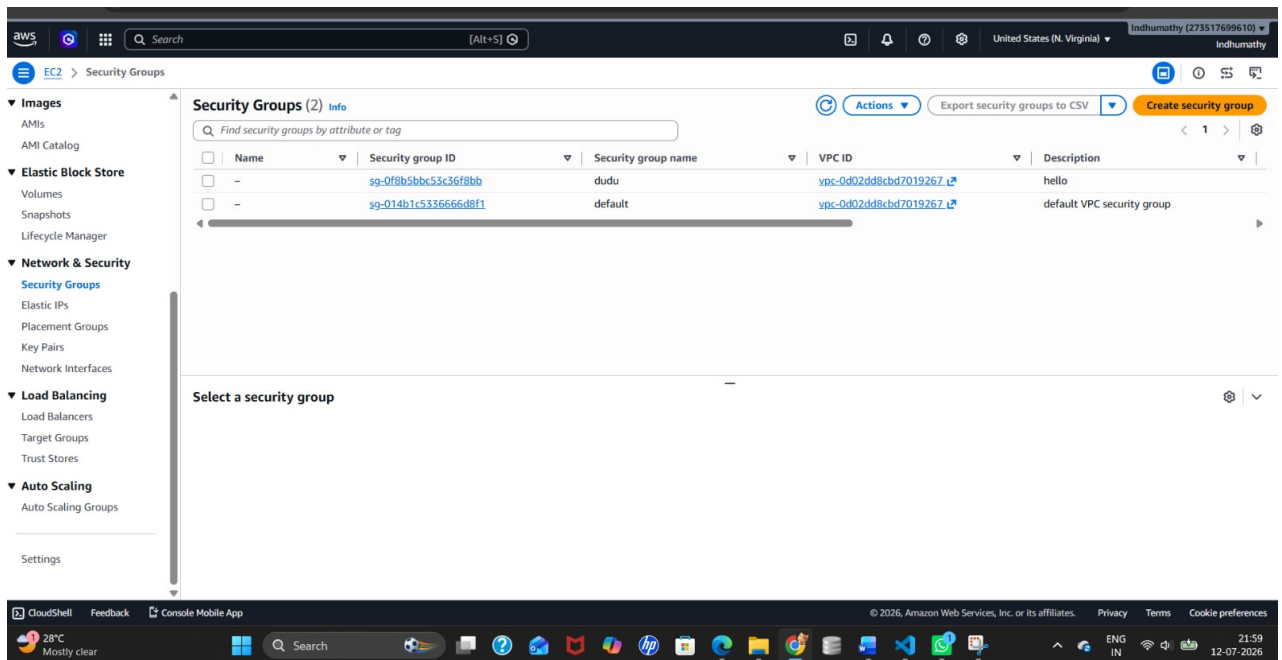

Key Features

- Created an EC2 Ubuntu instance.
- Configured Security Groups to allow:
 - SSH (Port 22) for secure remote login.
 - HTTP (Port 80) for website access.
- Connected to the EC2 instance using SSH.
- Installed and configured Apache2 web server.
- Uploaded website files to /var/www/html.
- Hosted the website successfully using the EC2 Public IP.
- Verified website accessibility from a web browser.

PublicIPs: 54.145.28.92 PrivateIPs: 172.31.23.245

The screenshot displays the AWS Management Console interface. At the top, there's a navigation bar with the AWS logo, search bar, and user information (Indhumathy). The left sidebar shows the navigation menu with categories like Dashboard, AWS Global View, Events, Instances, Images, Elastic Block Store, and Network & Security. The main content area is titled "Instances (1/1) Info". It features a table listing EC2 instances. One instance, named "indhu" with ID "i-0f42e0f7b3707b0b5", is shown in a "Running" state. Below the table, there's a detailed view for the selected instance, showing its summary, public IP address (54.145.28.92), private IP address (172.31.23.245), and hostname (ip-172-31-23-245.ec2.internal).

Name	Instance ID	Instance state	Instance type	Status check	Availability Zone	Public IPv4 DNS	Public IPv4 ...	Elas
☒ indhu	i-0f42e0f7b3707b0b5	Running	t2.small	Initializing	us-east-1c	ec2-54-145-28-92.com...	54.145.28.92	-

Outcome

Successfully deployed a static website on an AWS EC2 instance with secure network access using Security Groups. This project demonstrates practical knowledge of AWS cloud services, Linux administration, web server configuration, and basic cloud deployment.
