

Project Title

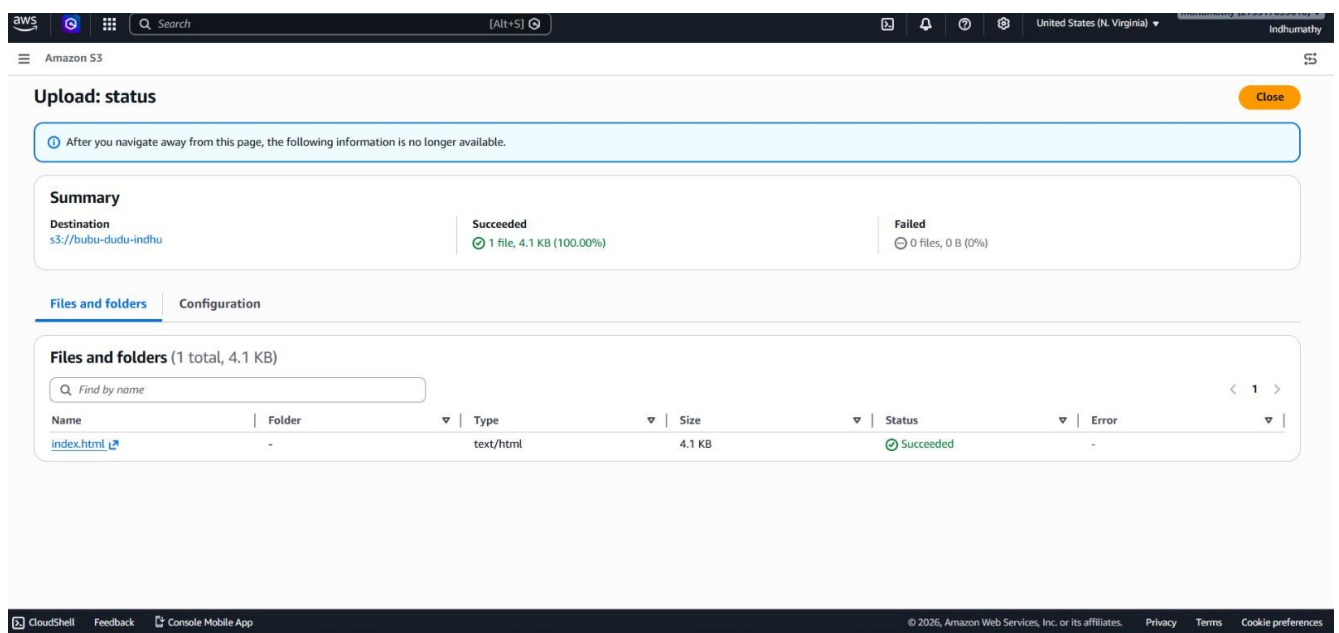

Ticket Booking Website Hosting Using AWS S3 Static Website Hosting

Project Description

- Designed and deployed a responsive **Ticket Booking Web Application** using **HTML, CSS, and JavaScript**, and hosted it on **Amazon S3 Static Website Hosting**.
- Configured the S3 bucket for public access, enabled static website hosting, uploaded the website files, and applied a bucket policy to allow users to access the website over the internet.
- Successfully deployed the application using the S3 website endpoint, demonstrating cloud storage and static web hosting capabilities on AWS.

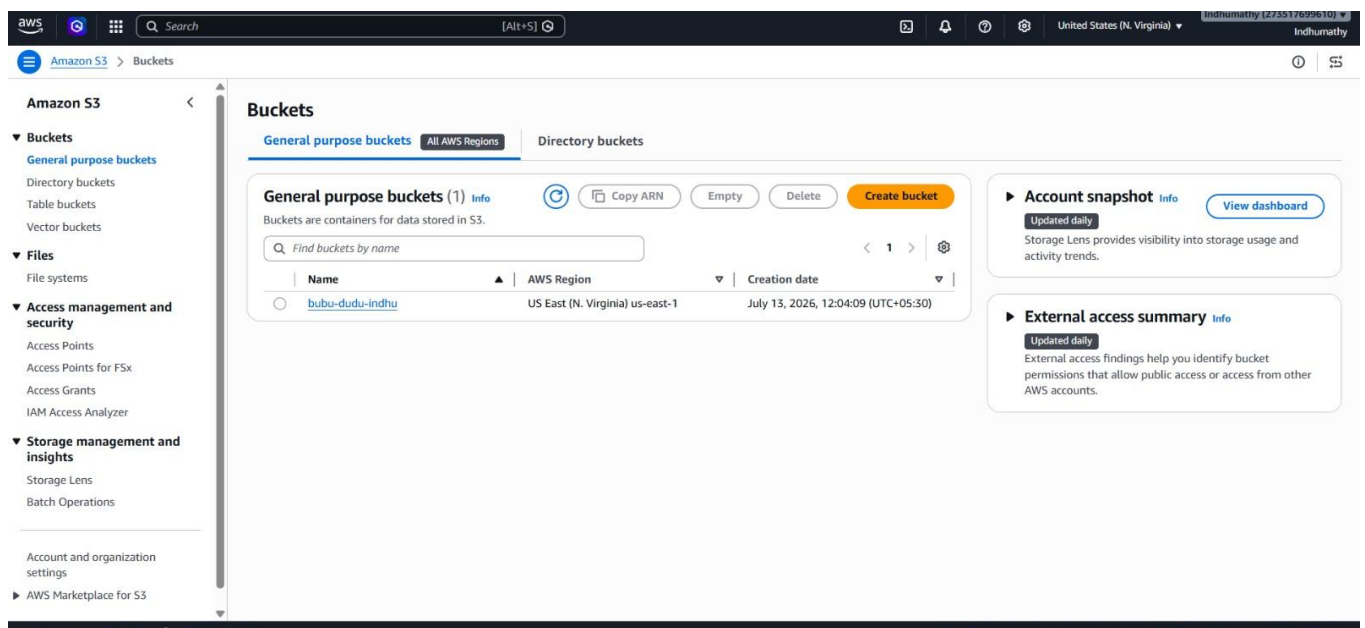

Technologies Used

- Amazon Web Services (AWS)
- Amazon S3
- Static Website Hosting
- S3 Bucket Policy
- HTML5
- CSS3
- JavaScript

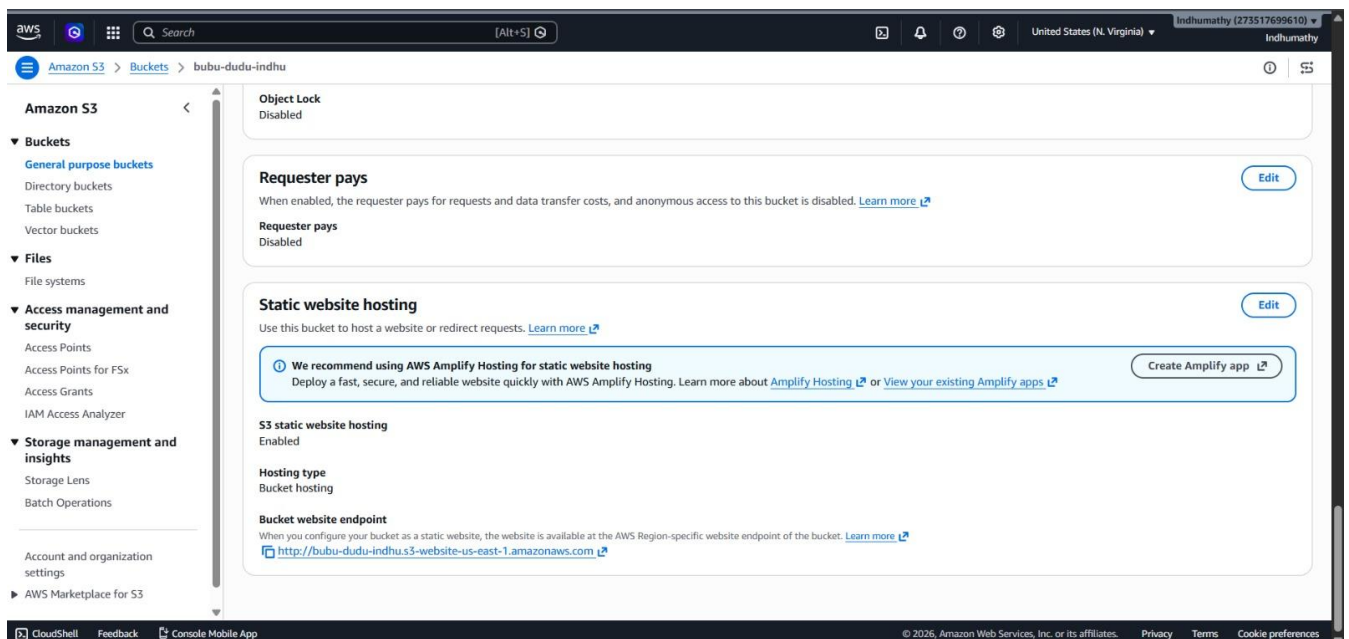

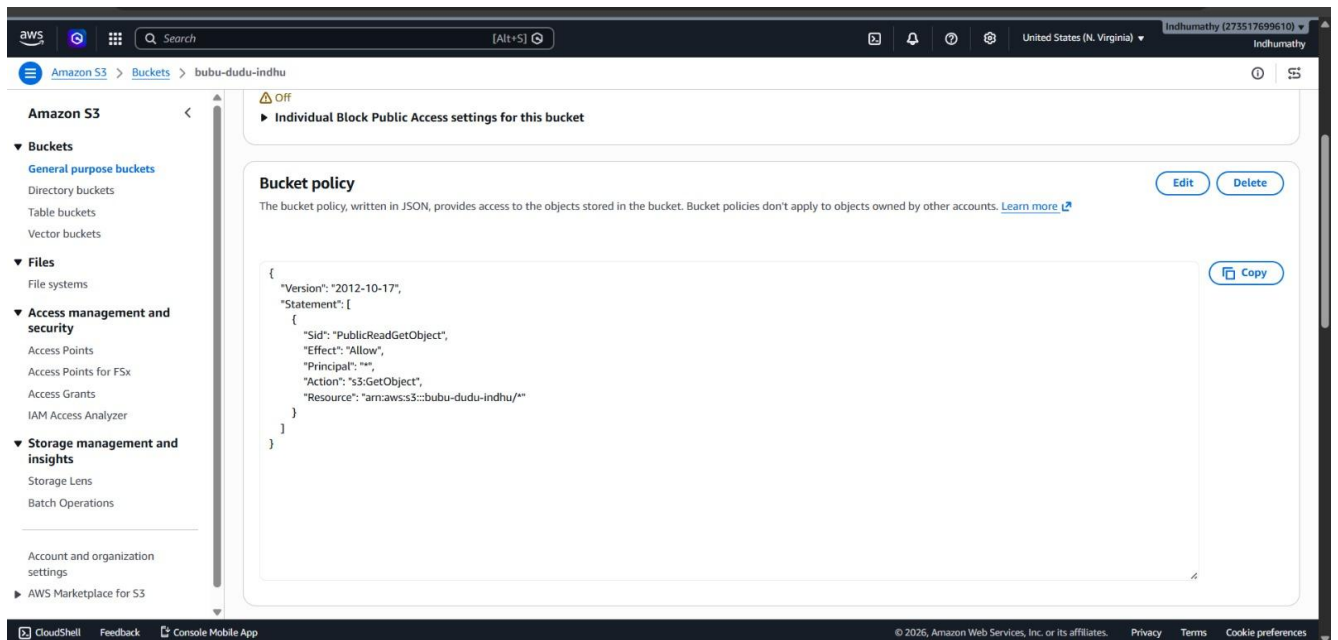

Key Features

- Created a Ticket Booking web application.
- Designed a responsive and user-friendly interface.
- Configured an Amazon S3 bucket for static website hosting.
- Uploaded website files (HTML, CSS, JavaScript) to the S3 bucket.
- Configured Bucket Policy for public read access.
- Enabled Static Website Hosting.
- Hosted the website using the S3 Website Endpoint.
- Verified public accessibility through the generated URL.

Project Workflow

1. Developed the Ticket Booking webpage using HTML, CSS, and JavaScript.
2. Created an Amazon S3 bucket.
3. Uploaded website files to the bucket.
4. Disabled Block Public Access (for hosting).
5. Added a Bucket Policy to allow public read access.
6. Enabled Static Website Hosting.
7. Configured **index.html** as the default document.
8. Accessed the website using the S3 Website Endpoint URL.

Website Features

- User Name input
- Email input
- Event selection
- Date selection
- Time selection
- Seat type selection
- Number of tickets
- Book Now button
- Responsive and clean UI
